### Supply of hard coal to public power stations and all coking plants in the Community in 1990

1. Increase in hard coal used in power stations and coking plants from 258.0 to 268.0 million t or from 81.8% to 83.7% of total supplies

In 1990 deliveries of hard coal to public power stations and all coking plants in the Community totalled 268.0 million tonnes. This means that these two major types of consumer took up 83.7% of Community hard coal supplies (1989=81.8%). The increase in sales was 10.0 million t (+ 3.9%). Whereas supplies to coking plants at 68.6 million t were 1.7 million t or 2.4% less than in the previous year (70.3 million t), power stations accounted for 199.4 million t, thus exceeding the previous year's figure (187.8 million t) by 11.6 million t (+ 6.2%).

2. Fall in Community coal supplied to power stations and coking plants from 174.8 to 171.1 million t or from 67.8% to 63.9%

171.1 million t (63.9%) of hard coal deliveries was Community coal (1989 = 174.8 million t or 67.8%), of which 139.8 million t was consumed by power stations (1989 = 140.3 million t) and 31.3 million t by coking plants (1989 = 34.5 million t).

3. Rise in hard coal imported from non-Community countries for use in power stations and coking plants from 83.2 to 96.8 million t or 32.2% to 36.1%

Imports from non-Community countries for power stations rose from 47.5 million t in 1989 to 59.6 million t in 1990 (+ 25.5%). Imports of coking coal rose from 35.8 million t in 1989 to 37.2 million t in 1990 (+ 4.1%).

The USA increased its lead as the main supplier to power stations and coking plants by supplying 42.5 million t (+12.1%) (1989 = 37.9 million t). A long way behind in second place came Australia with 15.1 million t (17.7%), followed by South Africa with 14.0 million t (+ 17.5%), Columbia with 8.0 million t (- 2.8%) and Poland with 5.8 million t (+ 9.6%). The USA (17.0 million t), South Africa (13.9 million t) and Australia (8.2 million t) were the major suppliers of steam coal for power stations, whereas the top three suppliers to coking coal were the USA (25.4 million t), Australia (6.8 million t) and Canada (1.9 million t).

4. The situation in the Member States

The main contributors to the increase in Community deliveries to power stations (11.6 million t) were the Federal Republic of Germany with 4.7 million t, followed by the Netherlands (+ 1.9 million t), France (+ 1.8 million t) and the United Kingdom (+ 1.6 million t). On the other hand, the major consumers of coking coal, such as the Federal Republic of Germany, Italy and the United Kingdom, reported a substantial drop in deliveries.
